## 3 & 4D ULTRASOUND

We are extremely pleased to offer the newest, state of the art imaging for our patients. Although 3D/4D ultrasound allows us to see images of developing babies previously unseen, we want you to have reasonable expectation and to fully understand the limitations of this new imaging technology.

This procedure is offered **between 26 & 32 weeks** in order to optimize the fluid and space of the baby's environment. It does not replace normal 2D ultrasound performance at 18-20 weeks.

There are several factors that may affect visibility of the baby and therefore may affect picture quality:

- Maternal weight
- Baby's position
- Amniotic fluid and location of the placenta

**This ultrasound is performed at the request of the patient and is not covered by your insurance. For further information about the cost of the Ultrasound, please contact the office.** This includes two 3 1/2 x 5 photographs, and a "burned" CD with pictures from the ultrasound to share with friends and family. Additional photographs may be purchased for an additional \$5.00 each. **This payment is expected at the time of your visit and is non-refundable.**

I understand that this procedure is not covered by insurance and I agree to pay Jacqueline Y. Sylvester M.D. for this service. I understand that this is not a diagnostic sonogram and it is not being used for medical decision making.
